

1. A square pyramid 40mm base side, axis 60mm long rests on HP on its base edge such that the axis is inclined to HP at 40 degree and 45 degree to VP. Draw the projections.

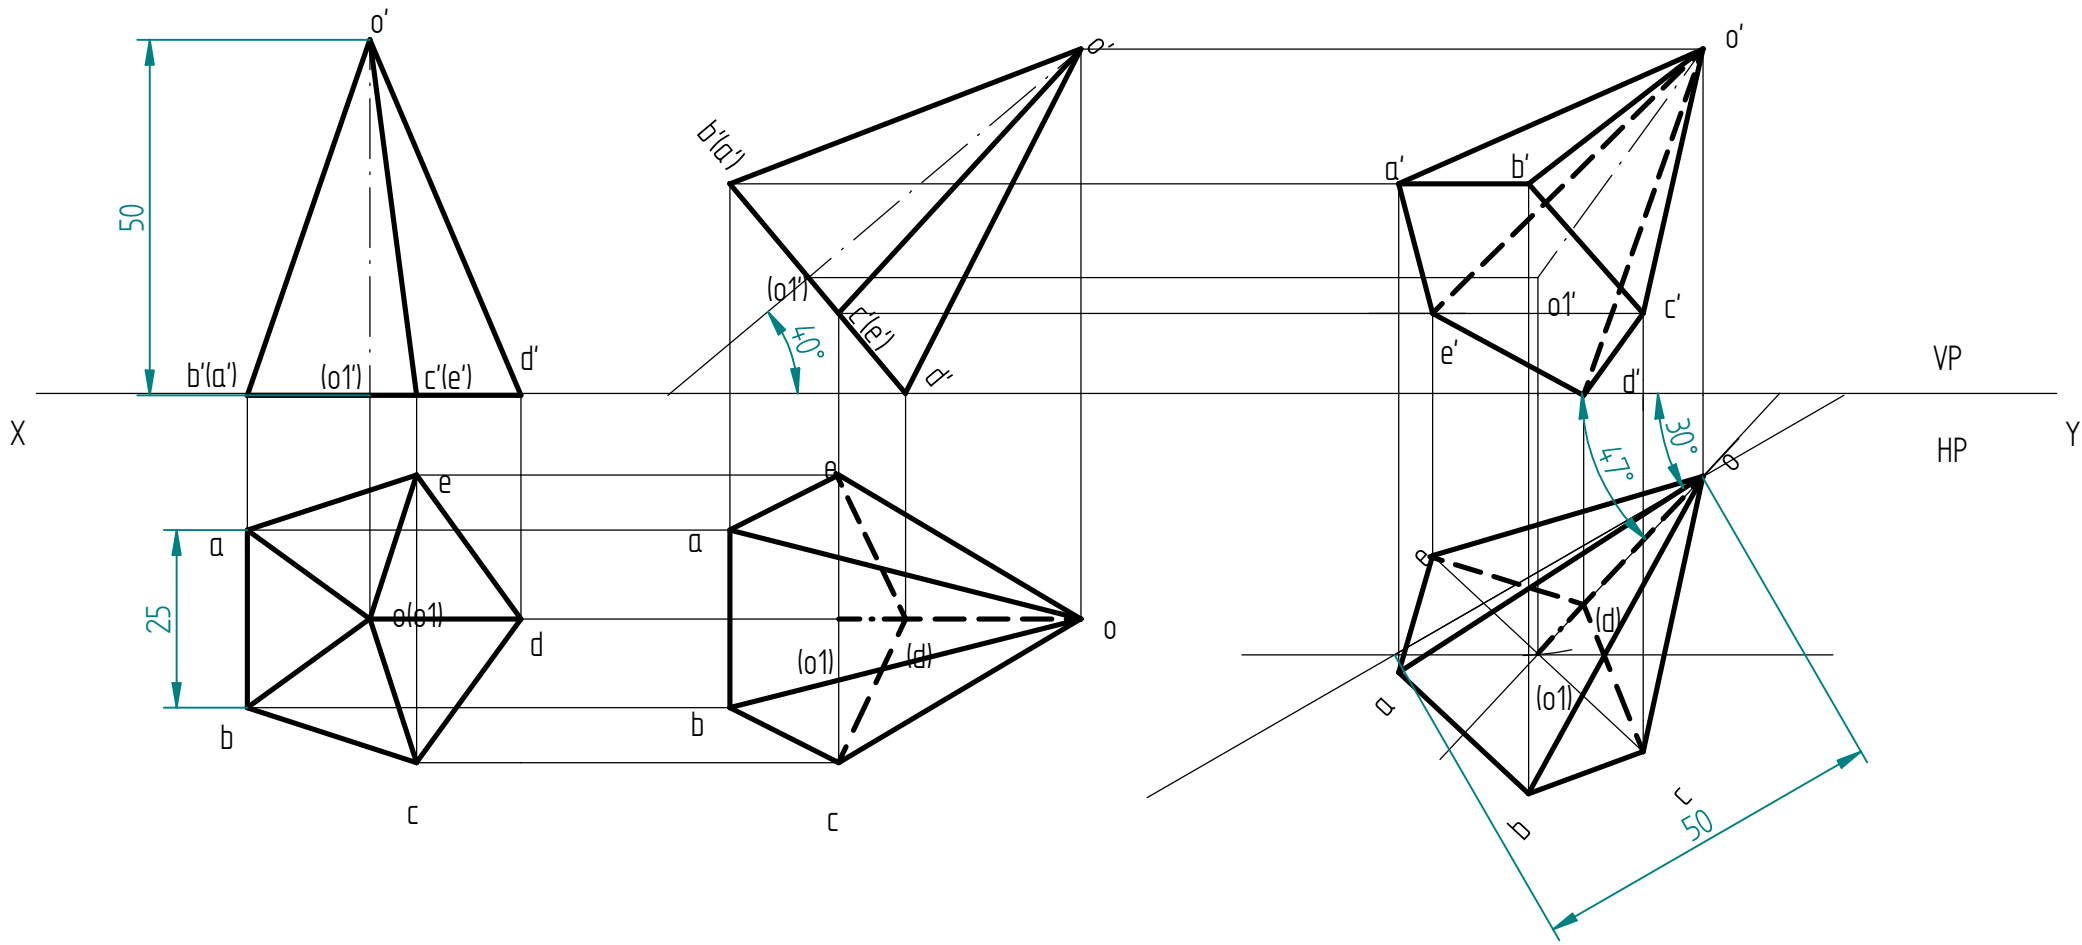

CHANDANA HY

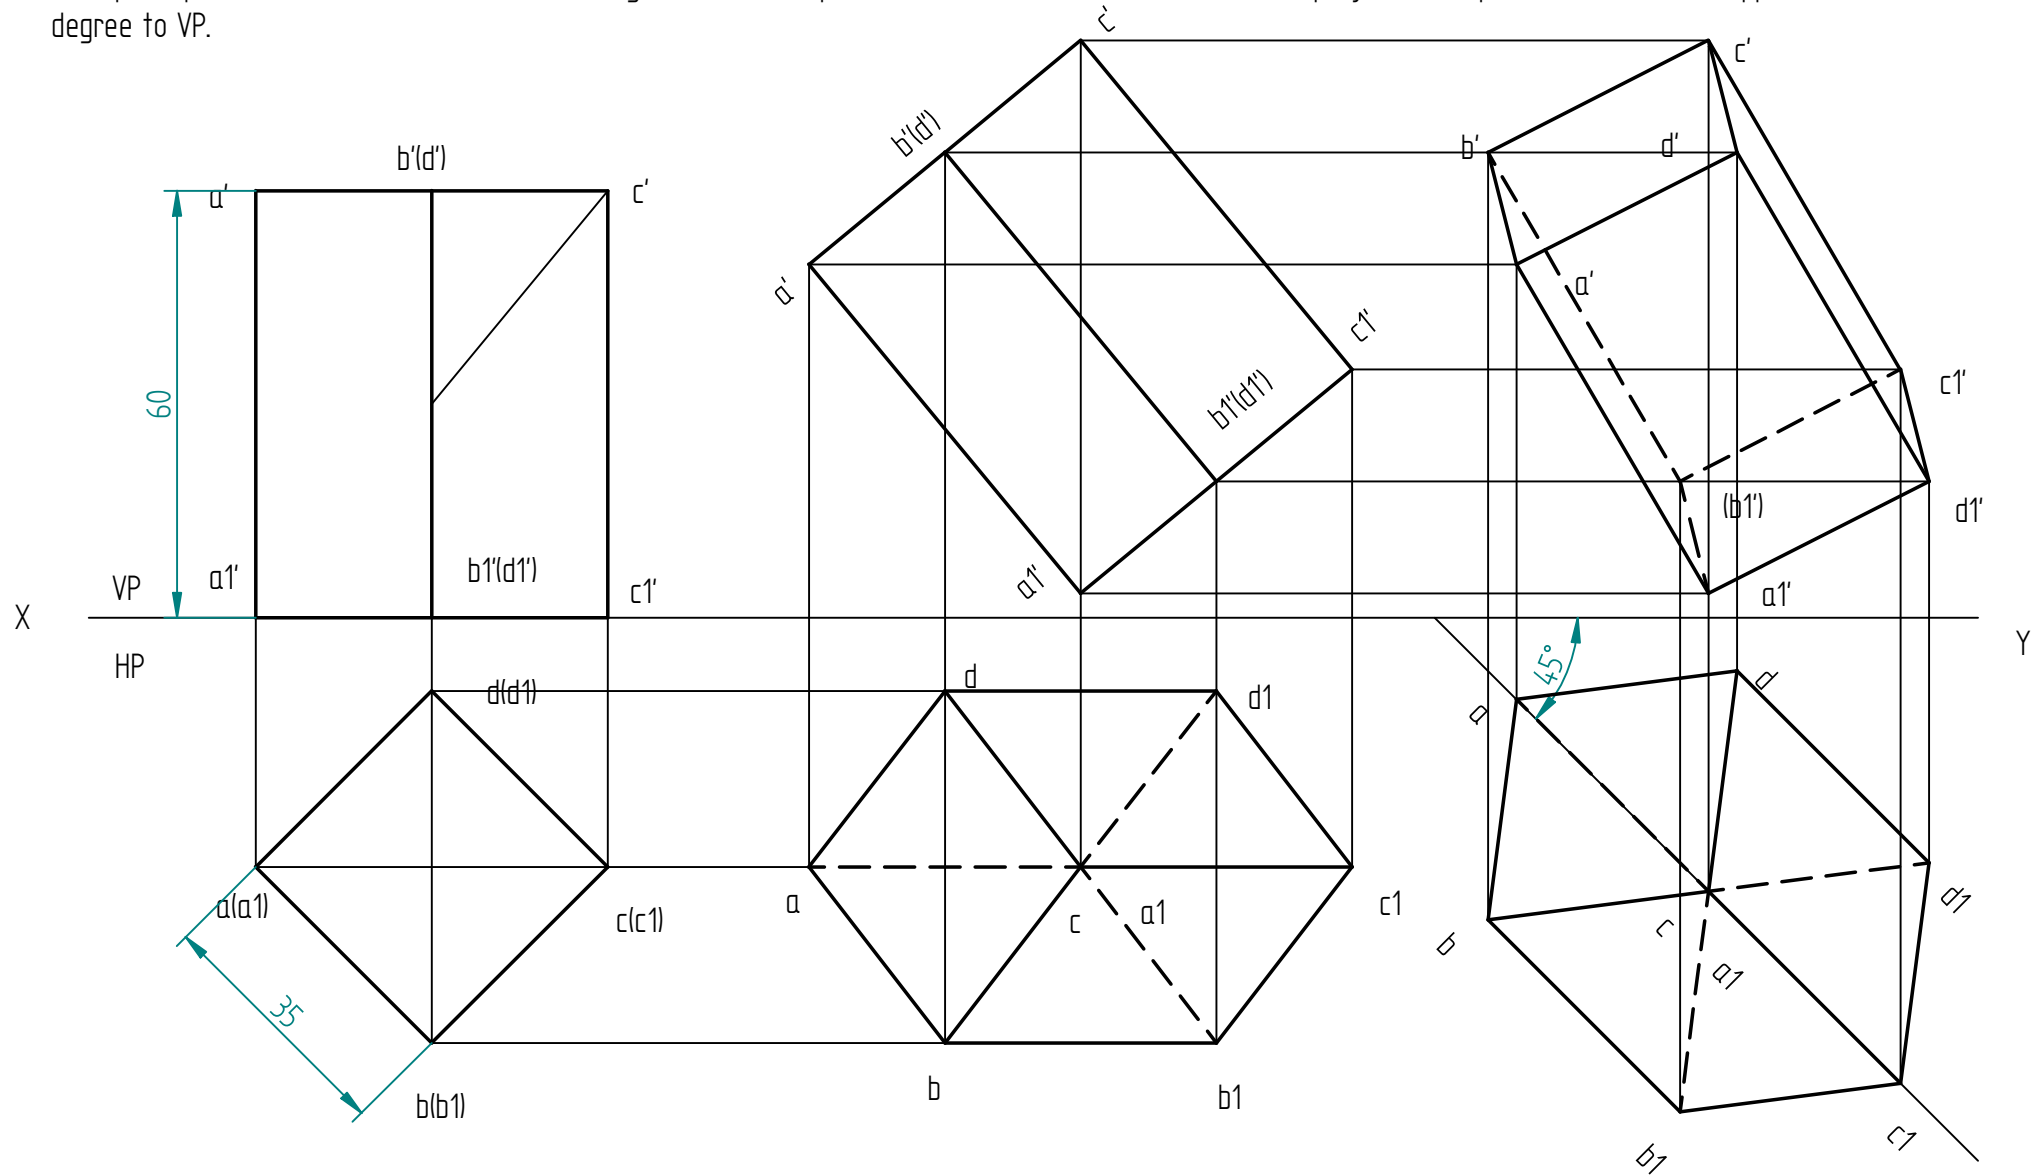

2. A square prism 35mm base side and 60mm axis length rests on HP on one of its corner of the base. Draw the projections of this when the axis of the prism is inclined to HP at 40 degree and appears to be inclined to VP at 45 degree.

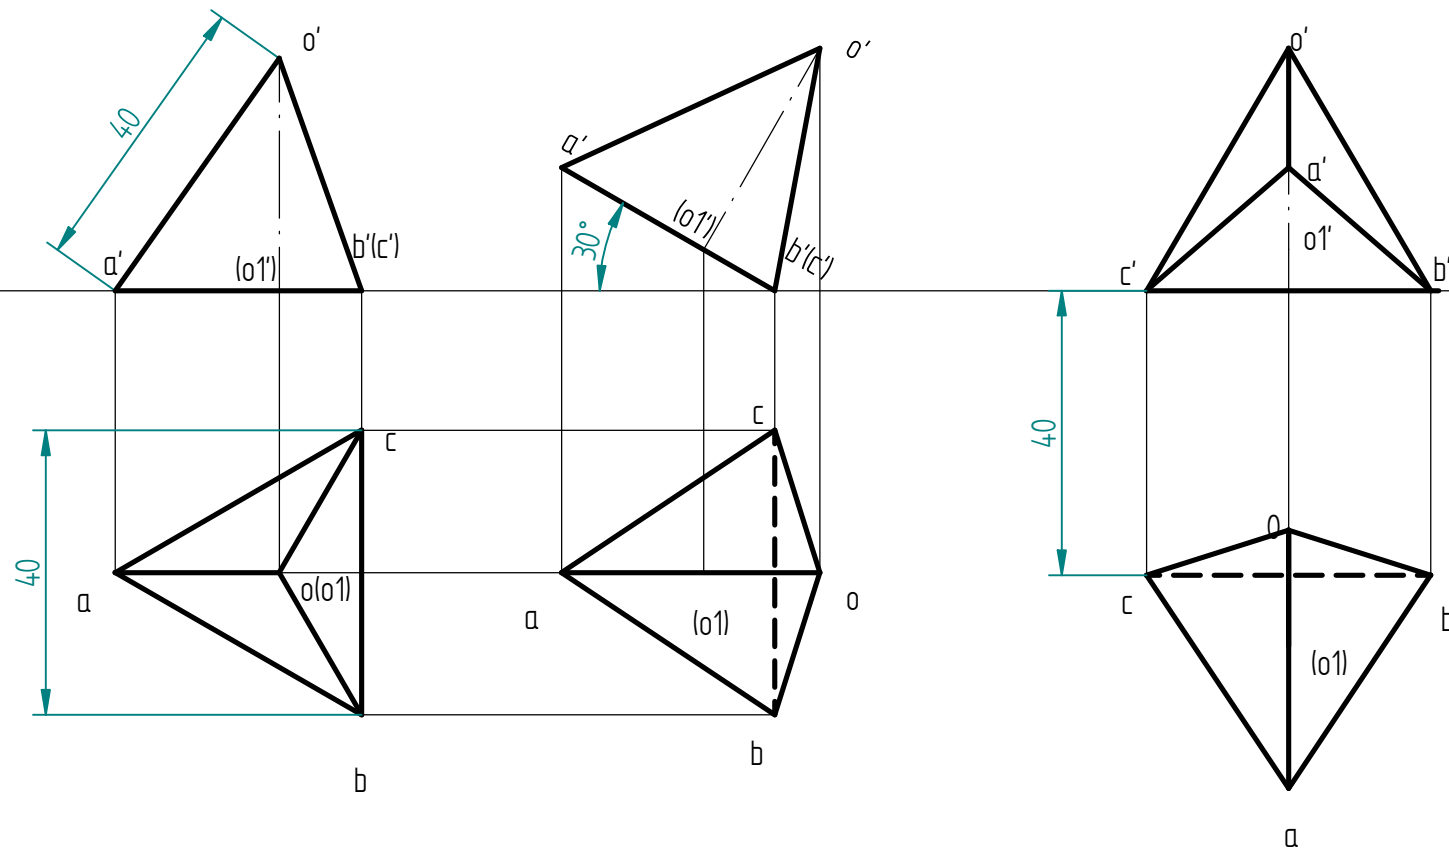

3. A pentagonal pyramid 25mm sides of the base and 50mm axis length rests on HP on one of its corners of the base. Draw the projection of the pyramid when the axis of pyramid is inclined to HP at 40 degree and VP at 30 degree.

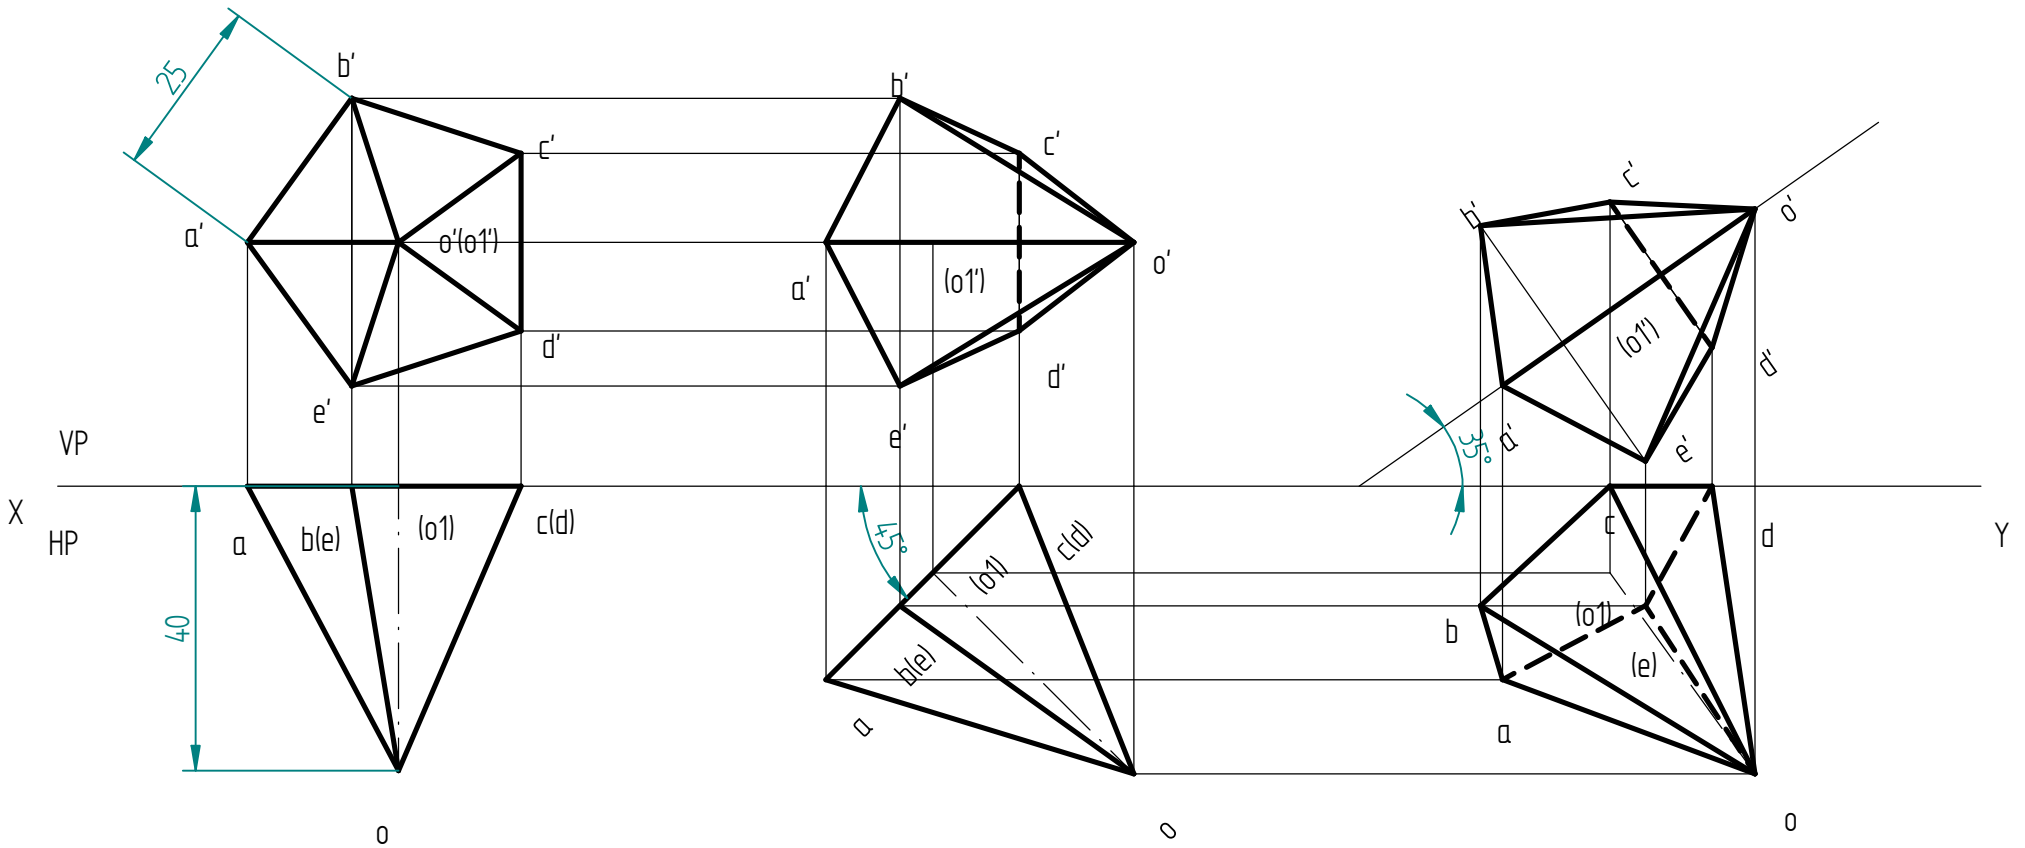

4. A square prism of sides 35mm as base and height 60mm is suspended from one of its corner. Draw the projection of prism when the axis appears to be at 45 degree to VP.

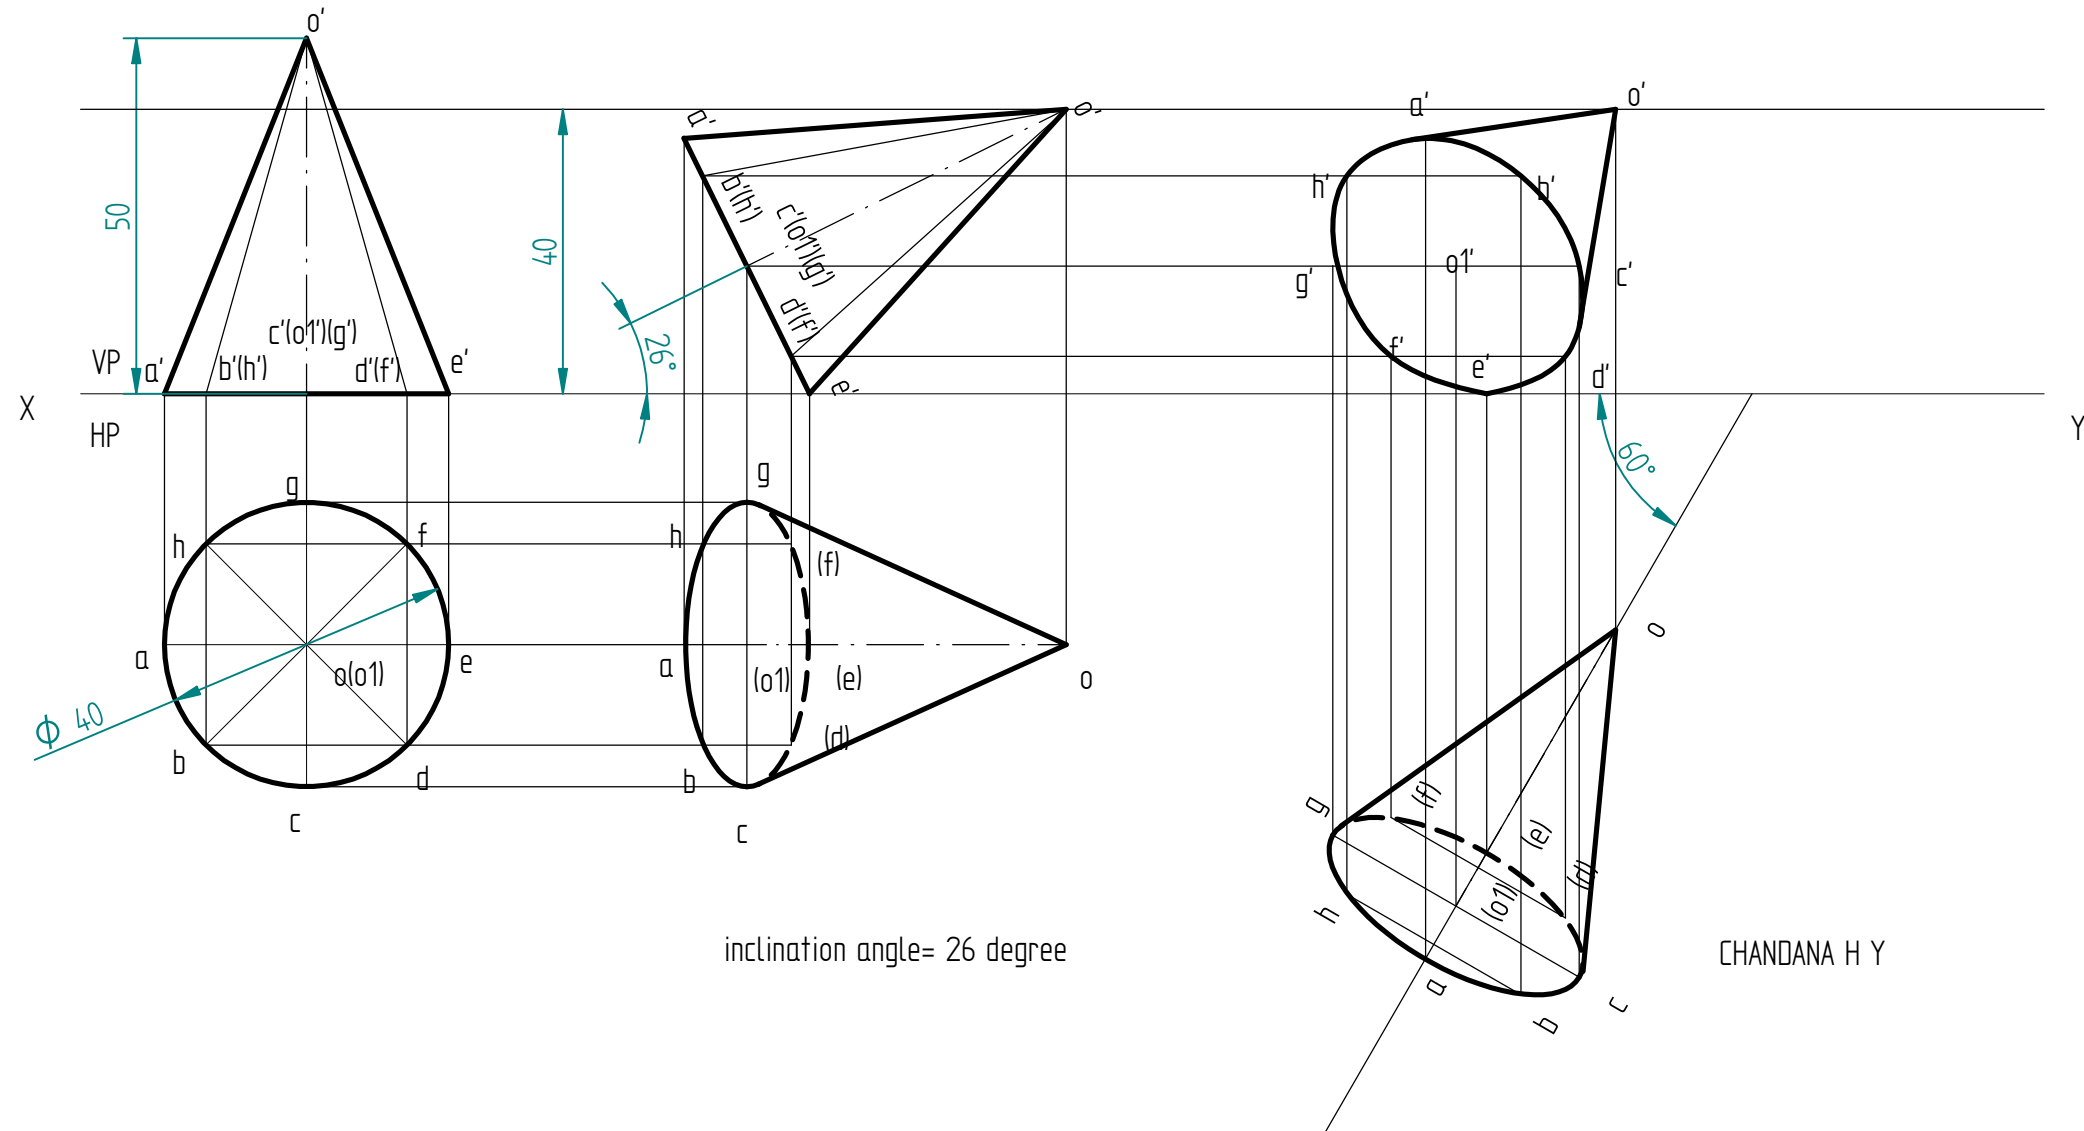

5. A tetrahedron of side 40mm is resting on one of its sides. The side is parallel to VP and 40mm away from it. It is tilted about the resting side such that the base containing this edge is inclined at 30degree to HP. Draw the projections of the solid.

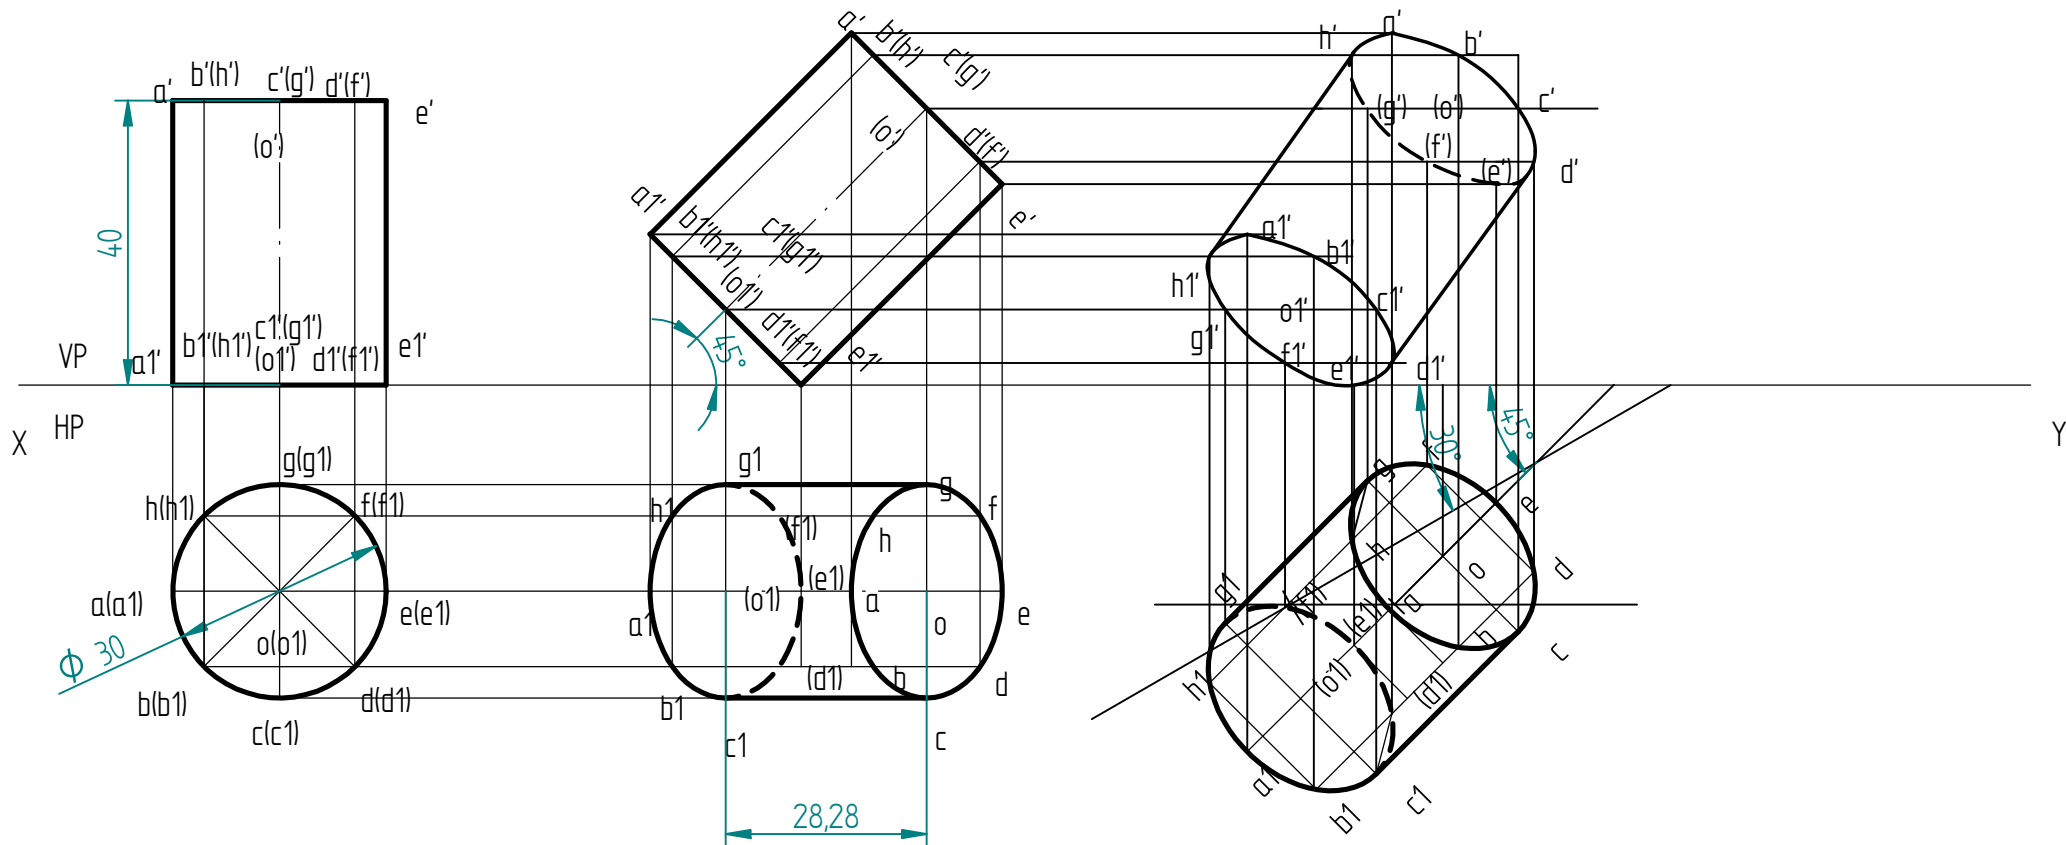

6. A pentagonal pyramid of side 25mm is resting on one of its base edges on VP such that its axis makes an angle of 45degree to VP and the front view of the axis is 35degree to HP. Draw its projections. Axis length of the pyramid is 40mm.

7, A cone of base diameter 40mm and axis length 50mm is resting on HP on a point on the circumference of its base such that its apex is at 40mm and its top view of the axis is inclined at 60 degree to VP. Draw the views and also determine the inclination of the axis when the base is nearer to the observer.

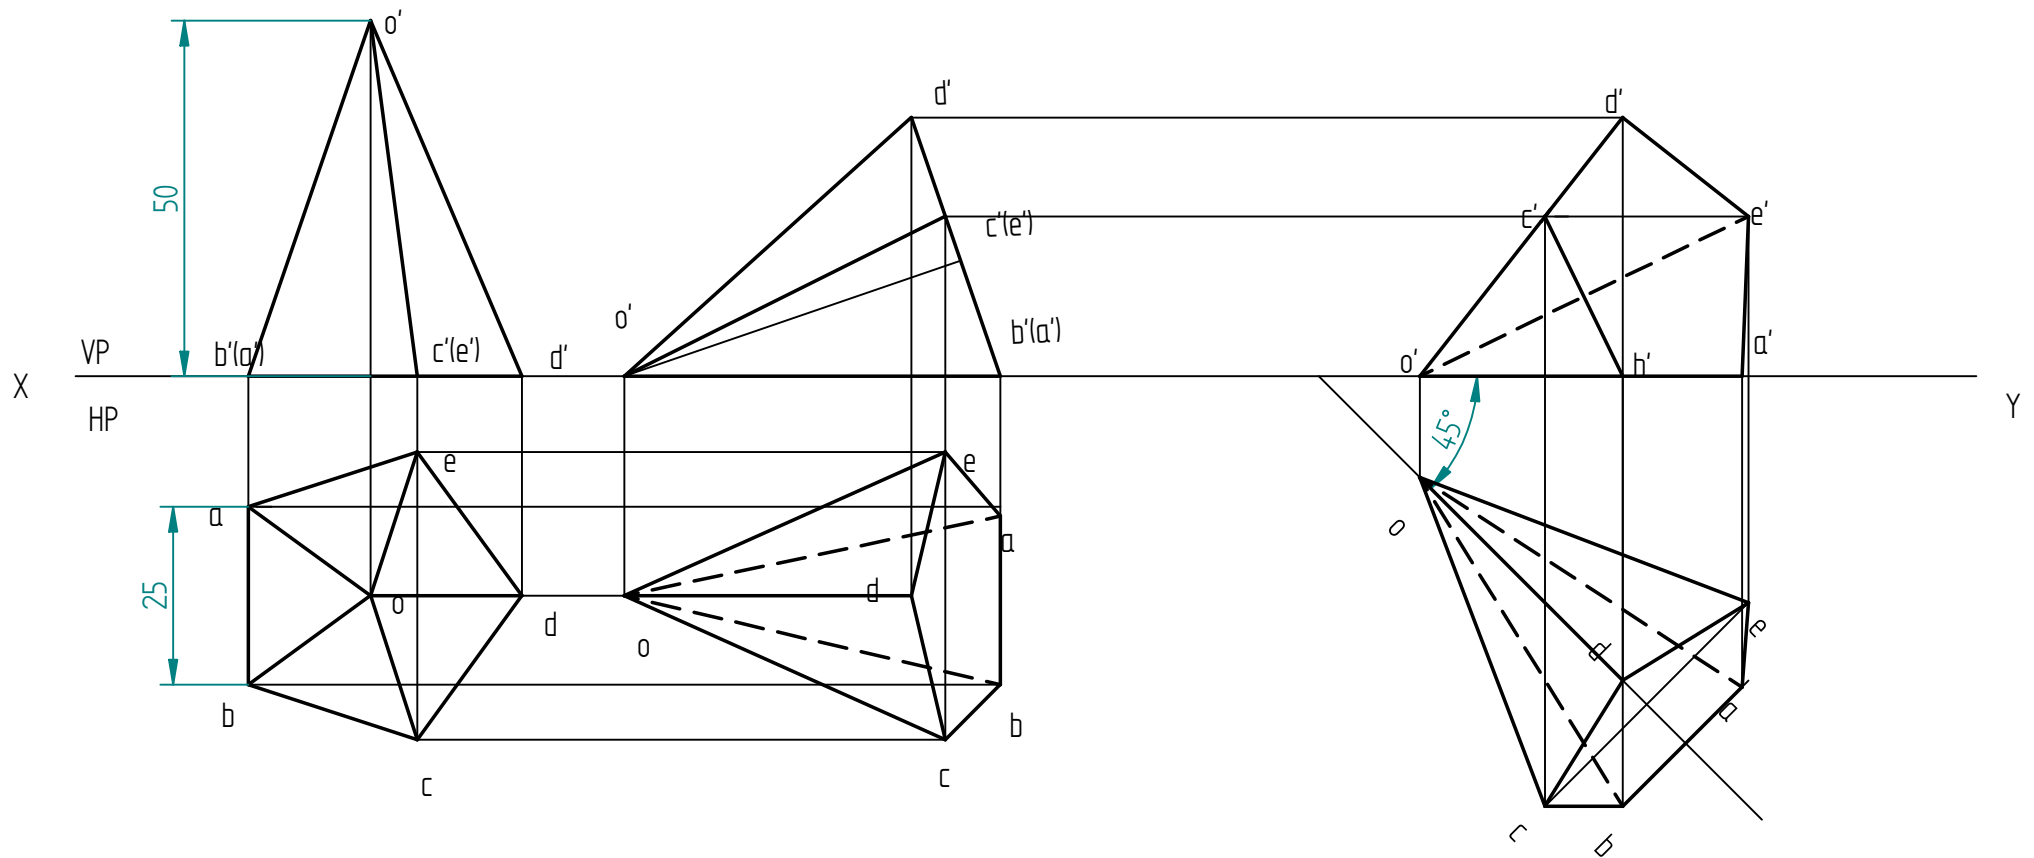

8. A circular cylinder of diameter 30mm and height 40mm is resting on HP on one of its point of circumference. The axis of the cylinder makes an angle of 45 degree to HP and 30 degree with VP. Draw the projections.

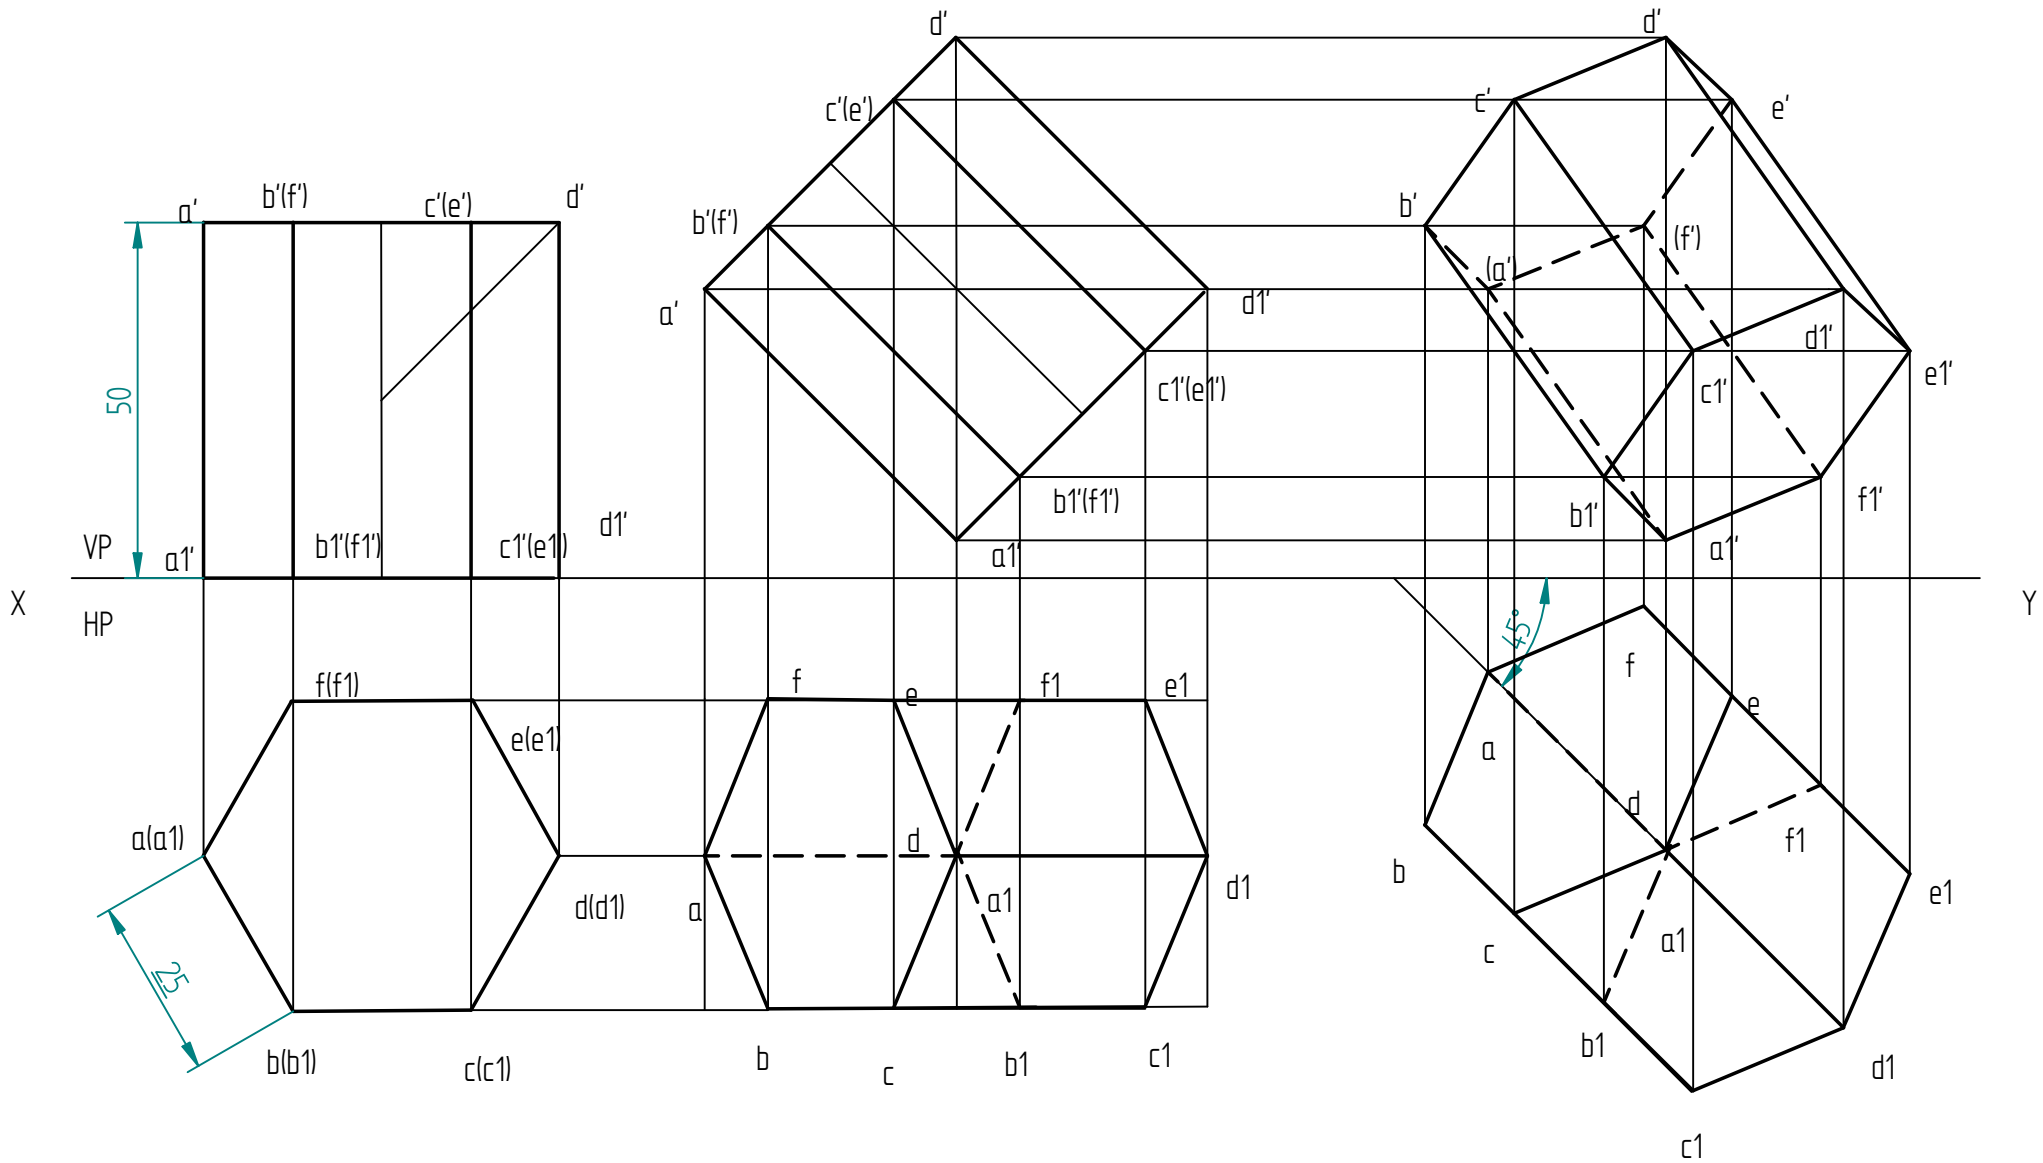

9. A pentagonal pyramid of base side 25mm and 50mm axis length rests on HP on one of its slant edges. Draw the projections of the pyramid when the axis appears to be inclined to VP at 45 degree.

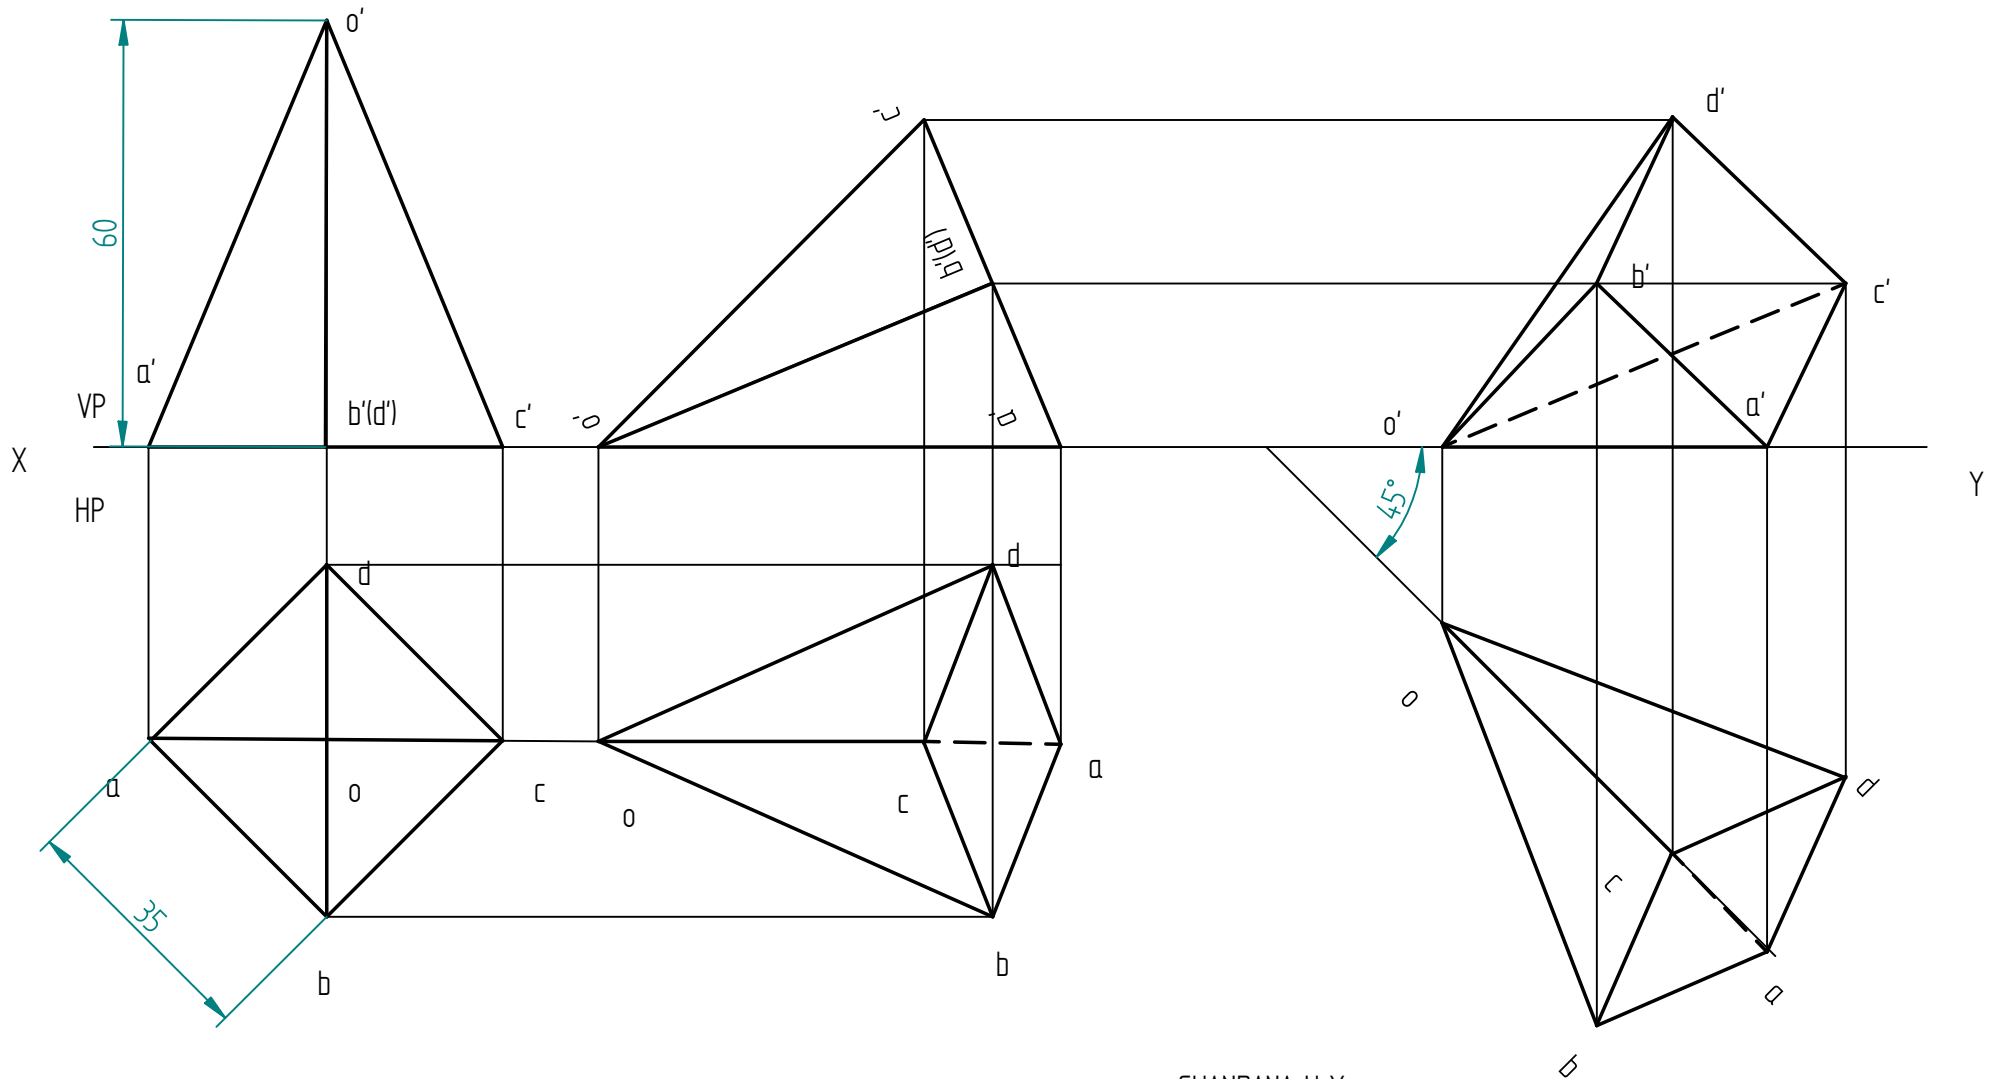

CHANDANA H Y

10. A hexagonal prism 25mm sides of base and 50 mm axis length is suspended freely from one of its corners, Draw the projections of the prism when the axis appears to be inclined to VP at 45degree.

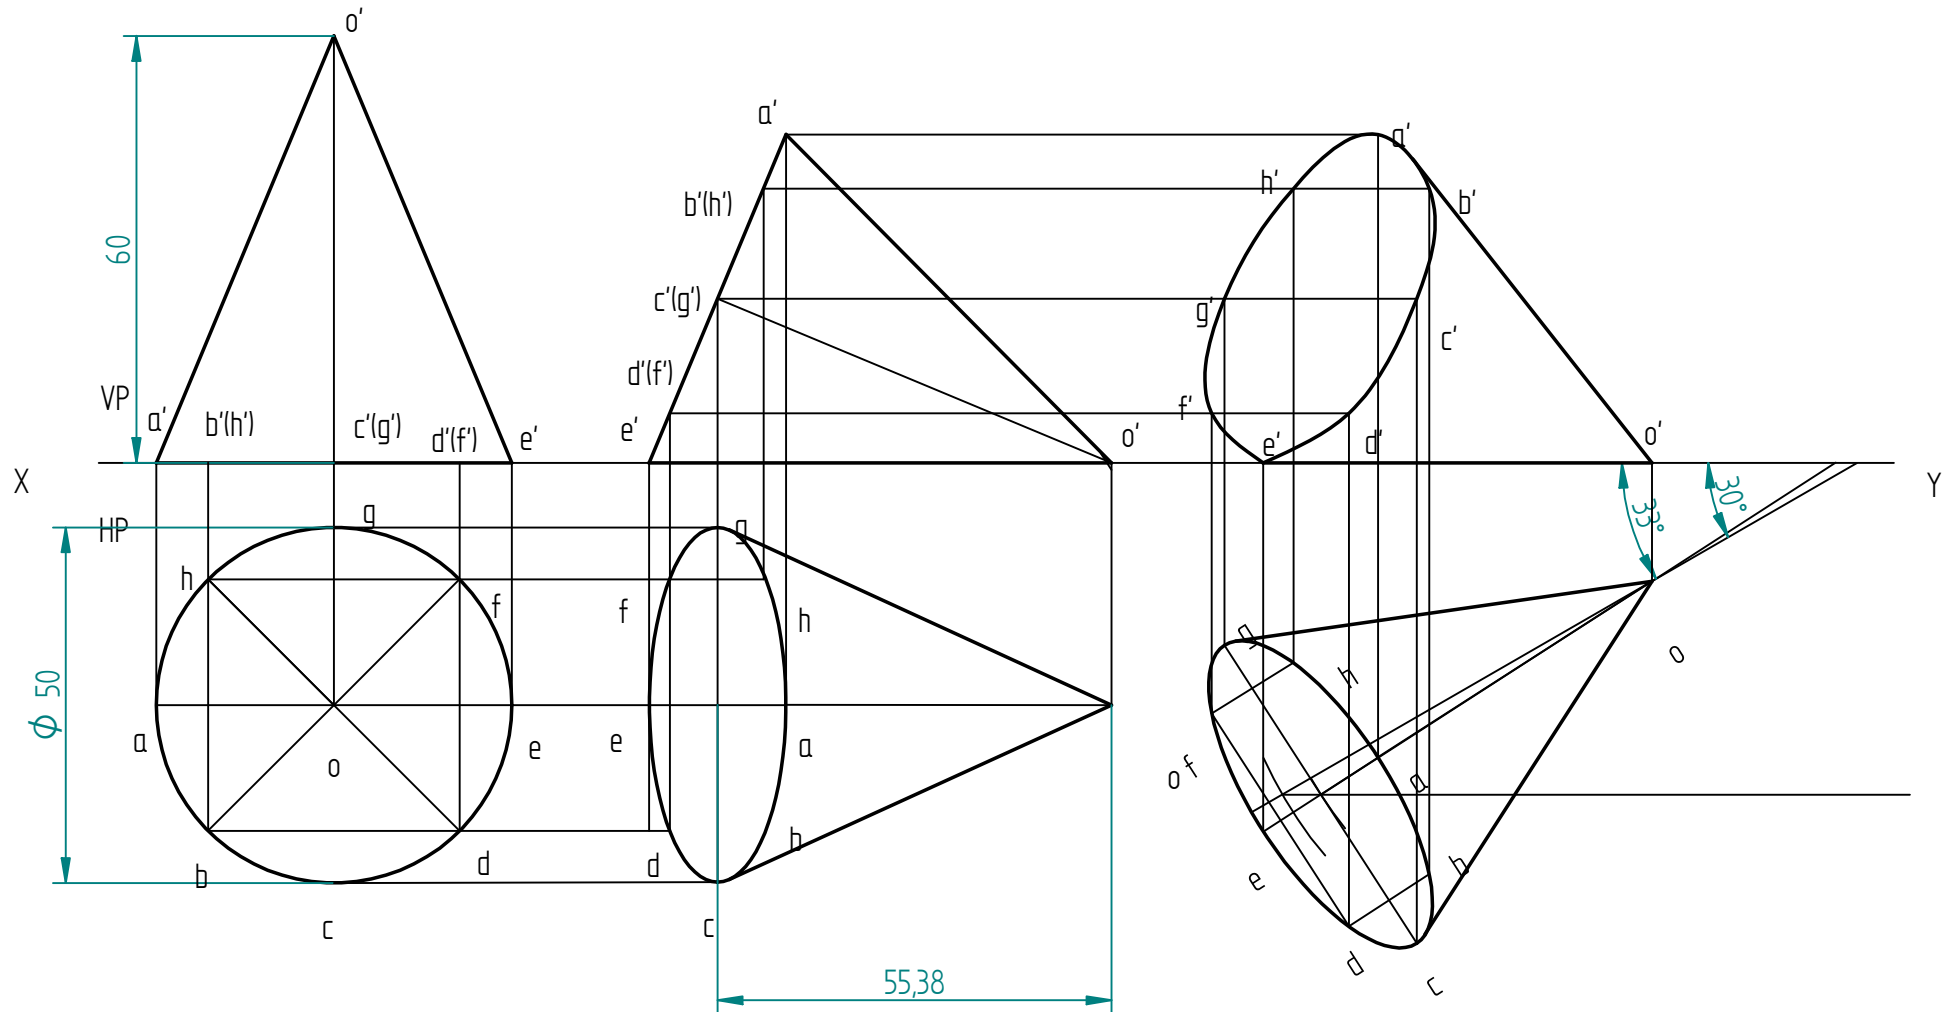

CHANDANA H Y

11. A square pyramid 35mm sides of base and 60mm axis length rests on HP on one of its slant edges. Draw the projections of the pyramid when the axis appears to be inclined to VP at 45degree.

12. A cone of 50mm diameter and 60mm axis length rests on HP on one of its generators. Draw the projections when the axis is inclined to VP at 30degree.
